OCTOBER 2026

Discover the benefits of HVAC maintenance

After a long, hot summer, inspecting your HVAC system for general wear and tear can be a vital part of ensuring energy efficiency, comfort and savings.

BI-ANNUAL HVAC MAINTENANCE IS RECOMMENDED, WHICH MAY INCLUDE:

- Adjusting equipment schedules and temperature set points
- Recharging refrigerant
- Repairing air-side economizers
- Cleaning condenser coils
- Modifying outside air intake percentages
- Ensuring system safety and operability

Lower temps mean less watering

With the temperatures finally decreasing, SRP wants to remind you that your business's landscaping will need watering less frequently. According to the Arizona Meteorological Network, ryegrass should be watered about once or twice a week once it's established during the winter. Bermuda grass goes dormant in the winter and requires water just once or twice a month if there's no rainfall.

When setting a winter schedule, make sure to water thoroughly and deeply each time to help roots grow deep into the soil, where they'll be better protected during the colder winter months.

Visit [srp.net/savebizwater](https://www.srp.net/savebizwater) to learn more about SRP's water conservation efforts.

Prevention is key to a fire-safe business

October is National Fire Prevention Month, and SRP wants all of our customers to be wary of fire dangers around their businesses. Here are a few tips to keep you and your employees and customers safe:

-  **DON'T overload electrical cords:** While extension cords and multi-outlet splitters seem convenient, many cords don't have overcurrent protection. A standard indoor extension cord is usually rated around 13 amps. When plugged into a 20-amp circuit with several appliances being used at once, that cord could be overloaded without the circuit breaker ever tripping.*
-  **DO examine cords for frayed and broken ends:** Constant use and time can lead to cracking and exposed wiring. Damaged cords should always be replaced and never patched with electrical tape.
-  **DO have an emergency plan:** Make sure all employees know what to do in case of a fire. Post building evacuation plans and conduct regular fire drills.

**According to the National Fire Protection Association (nfpa.org)*

Charge up your EV and business with SRP

SRP's updated incentive program makes it easy and affordable to add electrical vehicle (EV) charging stations to your small business. Qualifying businesses can receive:

- **\$2,500** per networked Level 2 EV charging station port for businesses and **\$3,500** per port for government, multifamily, nonprofit and school customers.
- **\$20,000** for locations installing one to four DC fast charging stations for businesses and **\$25,000** for government, multifamily, nonprofit and school customers.
- **\$300** in Level 2 prewiring allowance for new construction and **\$500** for retrofit projects.
- **\$200** in Level 1 prewiring allowance for new construction and **\$300** for retrofit projects.

Visit srp.net/ev-charger for further information and to confirm your eligibility.
